    - Completing courses within Appium and mobile testing to integrate scripts with clients using Flutter applications
    - Create test cases based on Jira user stories, Epics, & supporting wireframes
    - Logged failed/passed test cases in ALM software, with supporting regression testing
    - Working in an Agile environment
    - Attending and participating in daily stand-ups
    - Regularly communicating with the development team, PM's, PO's and other QA verticals to stay on pace for sprint test criteria

General Assembly, Remote — *Software Engineering Immersive Student*

FEB 2022 – MAY 2022

- ➔ *12-week, 500+ hour training program focused in Git/Github, HTML, CSS, JavaScript, Node, MongoDB, SQL, Python, etc. showcased in projects below and within my portfolio:*
- Project 1 - Vanilla JavaScript & DOM manipulation - *What the Truck*
    - This game was built to replicate the classic board game, "Traffic Jam"
    - Game board/pieces are displayed via HTML/CSS and create user interactivity via JavaScript & pieces feature the drag/drop method for a more animated visual effect

- Project 2 - Full Stack Node app - *Fantasy Dragball*
    - This game is a rendition of "Fantasy Football", utilizing drag queens as "players"
    - Frameworks & features: Axios, user authentication, MongoDB, RESTful routes (GET, POST, PUT & DELETE), LiquidJS

- Project 3 - Full Stack React/Node app - *GhostBustr*
    - This full-stack application brings the experience to the user to be able to view an index of haunted destinations, with the ability to log visits to each, recording your experience, date of travel, and rate the scare factor
    - Frameworks & features: React.js, Node.js, MongoDB (MERN stack), user authentication, seeded data, subdocuments, CRUD functionality
    - Within this project, I worked cohesively with a team of 3 for development
        - Role: my focus was primarily on back-end development and the interactivity with the front-end. Primary communicator throughout the

project, utilizing Slack, Github, and personal Zoom meetings to cohesively be goal setting and updating our app
- Project 4 – Full Stack React/Node app – *Check My Fit*
  - This full-stack application replicates that of most social media sites for users to rate & interact with outfit picture uploads
  - Frameworks & features: MERN stack, several collections, and subdocuments, relating on many-to-one and many-to-many relationship, full CRUD, Bootstrap
  - Worked cohesively in a pair for development
    - Role: primary was to create/test the back-end routes, deploy routes to the front end, as well as add in logic for conditionals in display. Team lead for goal setting/tracking, communication, and deployment

CHG-CompHealth, Remote & SLC, UT — *Client/Provider Rep*

FEB 2020 – NOV 2021
- Completed 250+ outbound calls a week to establish new contracted clients and providers
- High conversion of leads to placement through qualification, communication, & setting expectations
